Vehicle Tracking System

Autoterminal Japan Ltd. "ATJ" has developed new electronic function on its website, the function is called Vehicle Tracking System (VTS), VTS assist ATJ's customer in monitoring their vehicles starting from delivery into the ATJ Terminal Receiving yards, in-process until shipment. The customer can trace all the activities of the vehicles within the yard, the VTS captures the real-time date and time of the work order activities and update the customer over the website at their portable computers and gadgets.

Steps on how to use the VTS

- Input the VIN/Chassis No. of the vehicle in the VTS (VIN/Chassis Nos. should be inputted completely to show the correct tracking information). Click Show to view the VTS Information.

Figure-1 ATJ Website Home Page (Search Vehicle Tracking System)

- The VTS pop up window will appear on the screen (Shows the details and status log of the vehicle).
